

# Construction OS&H

## A training course for design & project management teams

## Preliminary quiz

This short quiz will help the Course Tutor to teach and lead this course in a way that responds more specifically to your existing knowledge. Please answer the questions carefully but feel free to express your own understanding.

1. Why should the design & project management teams of a construction programme get involved with Occupational Safety and Health?
2. How can the organisation structure of a construction project be designed to ensure that the project is managed in such a way as to ensure that everyone involved is in a safe and healthy environment?

3. What part can the designers of the permanent works influence the occupational safety and health of the project during its construction.

4. Explain what is meant by a 'Hazard' in the context of occupational safety and health.

5 Explain what is meant by a 'Risk' in the context of occupational safety and health.

6 Describe the main points that you would expect to find in an Occupational Safety and Health Plan for a construction project.

- 7 What are the main elements of an occupational safety and health management system?
- 8 A project goes through several phases between the first idea and the completed works. Suggest what these phases may be.

9 Propose some contract clauses that will require the contractor to provide a safe and healthy environment for everyone on the project

10 List the five most important welfare facilities required on a large construction project
